

Foam Concepts Inc.

Care and Handling for Limestone

- 1) Wash Hands thoroughly before handling.
 - 2) Store Materials in a flat, dry, clean location **out of direct sunlight**.
 - 3) Never lean materials vertical against a wall.
 - 4) Keep product well protected from weather- rain, wind and excess sun
 - 5) When carrying product - sudden uplifting from near the center point may cause the material to crack in some cases.
 - 6) A separated tooth diamond or masonry saw is recommended to ensure crisp cuts.
 - 7) There may be a 10% - 15% variation in the color selected from piece to piece due to variables out of our control.
 - 8) There may be variations in texture selected since this is a hand ground product which establishes individual character.
 - 9) There may be variations in dimensions within a tolerance of $+ / - \frac{1}{4}$ ".
 - 10) We recommend minimum $\frac{1}{4}$ " flexible grout joints on all sides of the parts for movement.
 - 11) We recommend following the Adhesive manufactures instructions whether we supply the adhesive or not.
 - 12) We recommend a penetrating sealer be applied to the product prior to or after installation. This will reduce dirt accumulation, streaking, staining, moisture absorption and protects the color.
 - 13) **Any concerns regarding Foam Concepts' product will only be resolved prior to installation**
-
